an emerald green newsletter.....

Volume 18, Issue 4

 Emerald Green, Inc.

June/Aug 2017

Today we performed your Late Summer treatment. It consists of:

- A balanced slow-releasing, low Nitrogen, summer fertilizer.
- Spot treatment for broadleaf weeds, nutsedge, and crabgrass.
- We will also check for lawn insects such as grubs, and treat as needed.

Do....

- ◆ keep kids and pets off lawn for 2-4 hours or until lawn is completely dry.
- ◆ limit the amount of activity on the lawn for the first 24 hours following this treatment.
- ◆ water lawn after 24 hours for best response from this treatment.
- ◆ mow regularly but no lower than 3 - 4 inches for the summer.
- ◆ inspect your lawn weekly. Call us **ASAP** if **ANY** brown spots or weeds appear. The earlier you call, the better chance for a timely and more effective resolution.

Don't....

- ◆ mow below 3 inches. Mowing tall discourages weeds and also reduces moisture loss by shading the soil.
- ◆ forget to sharpen dull mower blades !
- ◆ water your lawn after 4PM. Night watering encourages diseases. The best time to water your lawn is in the early morning. Heavy waterings are more beneficial than light waterings. Your lawn will require approximately 1 1/2 inches of water per week in 2 or 3 waterings per week for best results. Call to discuss if you have any further questions.

Seeding Alert !

Is your lawn showing the ill effects of the Summer? Our Aeravation & Seeding system plants seed directly into the soil without removing or damaging the good grass that is there. This assures high germination and fast establishment.

Be on the lookout for an Early Bird deal and extra prepay offer on Fall Aeravation and Overseeding booking in your mailbox!

Controlling Bermuda Grass

Bermuda Grass, or "*Wire Grass*" as it is widely known, can only be controlled using a total vegetation control, like Roundup, before overseeding.

Our Total Vegetation Control Program includes three(3) treatments done 2 weeks apart from each other and gives you the best control for bermuda before reseeding.

Please call us if you have any questions about your lawn or to discuss any of these services.

Lawn Hack!

Place shallow cans (like tuna cans) around your yard to check watering coverage and time how long it takes to deliver 1/2 to 1 inch of water which is what we recommend at each watering.
