

Turf Tips

Volume 18, Issue 5

an emerald green, inc newsletter.....

Sept/Oct 2017

Today we performed your Early Fall treatment.

It consists of: **BALANCED FERTILIZER**
BROADLEAF WEED CONTROL.

NOTICE: If there are any newly seeded areas, we did NOT apply weed control! These areas will get addressed next visit.

REMINDER: Fall Seeding & Aeravation

Our calendar is filling fast! Call us today to schedule your Fall Aeravation and Overseeding. Our technicians use a special machine called an AERA-Vator, and only the highest quality, pure grass seeds. We find this winning combination to be highly successful even in areas where a “plugger” method has not.

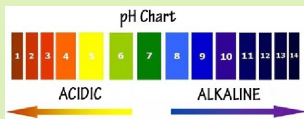

In preparation, please ensure all sprinkler heads are marked, as well as underground dog fences and other shallow-buried wires. We also recommend mowing right before your scheduled date, as mowing will have to wait a few weeks in order to allow time for germination.

We will leave after-care directions in your invoices with proper watering instructions.

Please note: Proper watering plays a vital role in successfully establishing a lawn from seeds.

The Time for Lime

As part of your Early Fall Application, our technician will be checking the pH of your soil. This measurement will tell us how acidic your soil is. Soil that is too acidic will prevent your grass from growing to its full potential, leaving it weak and vulnerable to being pushed out by more resistant weeds.

An application of lime, tailored to the specific needs of your lawn, will assist in correcting any acid imbalance and bring your soil closer to an ideal, neutral, pH.

Deep Root Feeding - a healthy investment!

Fertilize all Ornamental Trees & Shrubs in your landscape!

Fall is the most favorable time of year to deep root fertilize your ornamental trees and shrubs. Roots are growing and extending, searching for the extra nutrients needed. Ornamentals are the foundation of a good landscape, it pays to take care of them. Emerald Green's Deep Root Feeding offers your valuable ornamental trees and shrubs a full year's

supply of the major elements - Nitrogen, Phosphorus, Potassium, plus many of the micro-nutrients needed for healthy growth. This feeding will help your plants develop a stronger root system to help them overcome the stresses of drought.

Are you taking advantage of our new referral offer? For every friend or neighbor you refer (make sure they know to tell us you sent them) you will receive a \$15 credit. If your referral signs up for at least 5 applications in our Basic Lawn Care Program you will receive an additional \$15 credit! There is no limit on how many credits you can earn.
